Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, 48, and 49, drawn to a digital camera having a generic signal processing capability, classified in class 348, subclass 207.99.
 - II. Claim 12-43, drawn to a digital camera having a specific signal processing capability for performing image processing on the image data to enhance image quality, classified in class 348, subclass 222.1.
 - III. Claim 44-47, drawn to a digital camera having a shooting angle detecting unit, classified in class 348, subclass 135.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because generic image processing does not require specific image quality enhancement. The subcombination has separate utility such as image processing to enhance image quality for images stored within the camera.
3. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility

such as correcting image data for camera orientation prior to storage in the camera, without performing other generic image processing. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
